

Increasing Demand For Wheat In Markets Of The World Should Keep Grain Prices Firm

Mr. J. Obed Smith, former immigration commissioner for Canada in London, refers, in a letter to "Canada," the London weekly, to the growing production of foodstuffs in the United States and the increasing demand for them from other countries—speaking of wheat, he says:

"Canada sells her wheat to Belgium, France, Holland, Scandinavia, Italy and Germany, besides the Old Land and the United States. It is well known that the United States is rapidly increasing, despite the immigration quota, which prevents too many months arriving in the United States. This American market is nearest to Canada, and will be fed first.

"The Orient has suddenly discovered a liking for wheat bread, and shipments of Canadian wheat across the Pacific Ocean have shown a large and rapid increase. This will be the impetus of the market if the teeming millions of China and Japan could generally adopt the use of wheat for rice, which wheat can only be readily supplied by Canada. The wheat has no more market in the United States, and is probably used for wheat growing; their average result is far in excess of that in Canada, while heavy over-crop and cheapness make it impossible to raise and sell wheat on equal terms with Canada.

"The day of export of wheat or flour from the United States is over. This is why the Canadian farmer has prepared more land for crop this year, and why so many American farmers are crossing the international boundary northward and buying better land than their own at one-third the price. The inexorable law of supply and demand governs the price of wheat, and the violent fluctuations of the market seen lately the present market price is likely to be near the economic standard value of wheat for years to come. At that the Canadian farmer will profit."

Commenting on Mr. Smith's letter, "Canada" says: "The Canadian farmer is not so very far-fetched." The Canadian farmer is not so very far-fetched.

New Seller Satisfied

From U. S. & Kansas City

In a letter to the Canadian Government agent at Portland, Maine, David W. Hayes, who recently visited at Meadow Lake, Sask., writes:

"We feel more than thankful for your assistance in getting us here. We like this country very much, and have never seen a place that produced grain like this. The horses are fine, the land is rich, the climate is just what we need, and we will stay here, besides plenty of natural gas."

"I took a horse and, and it was hard to get 50 or 60 acres under cultivation. I will soon have the horse. I am building with horses, having the help of my neighbors, and I can pay them back with labor."

"The soil here is a black vegetable loam and very rich. We have been at a depth of from 12 to 25 feet, besides there are numerous springs, and more than eighty wells have been drilled here and can recommend this place to anyone. There is good fishing and hunting, and if we can get a few more we will have one of the best districts in the west. We are all enjoying good health and have good appetites."

Dairy Industry Booming

More bad news is announced for the pessimists. This time it is the boom year for the dairy industry in Canada. At this date there are officially reported to be 40,000 more cows of graded breed for export than at the same time last year, and 30,000 more of choice more than last year. In Canada alone is now importing 20 cents a pound in England, a price considered to be very attractive.

Nightingales in London

A nightingale singer to his name, and her numerous titles, were heard by residents in Highbury in the north of London recently. The birds settled in the branches of a tall tree in one of the parks, and watchers saw them clearly through open windows.

Trees in Western Canada

Betterment of Home Life By Improvement of Surroundings

The planning division of the forestry branch of the Canadian Government department of the interior recently completed its twenty-fourth annual free distribution of trees to farmers in the prairie provinces. In the 25 years the division has sent out for free distribution a total of 2,400,000 seedlings and cuttings of approximately five thousand different species of trees. The division has been established in western Canada since this distribution began. Several thousand carefully prepared planting reports each year furnish the forestry branch with accurate information as to the success of these plantations, and these reports indicate that fully 80 per cent of them are in a thriving condition.

The stock is grown at two forest nurseries stations, the one at Indian Head, Saskatchewan, supplying the southern portion of the prairie provinces, and the other at Suburban, Saskatchewan, providing material for the northern portion of the prairie provinces. The division has distributed 600 seedlings, cuttings and transplants were sent out from Indian Head and Suburban, and 1,800,000 seedlings and cuttings were sent out from Suburban to 3,010 farmers.

Most of this stock is used for planting shelter-belts about farms and ranches, but there is an increasing demand for material for field shelter-belts for protection and control of soil-erosion.

An interesting and important development of the tree planting movement is the attitude which teachers and educational authorities are beginning to take towards it. Many school grounds have been planted with the assistance of the forestry branch.

In Saskatchewan 152 schools were this spring supplied with 152 seedlings and cuttings, and a smaller number were similarly assisted in Manitoba and Alberta. This object lesson in the betterment of home life by the improvement of surroundings is viewed as very important by western educational authorities.

The system of distribution is co-operative, the farmer providing the land and labor and paying the expense of the seedlings, while the government supplies the plant material and expert advice. In the early days of the settlement it was generally believed that trees could not be made to grow on the prairie, but as a result of the work of the forestry branch the land has been reclaimed, and there is now a heavy demand for planting material.

Increase in Fish Marketed By B.C.

Salmon and Halibut

Largest Revenue For 1924 Was From Salmon and Halibut

British Columbia's fisheries production shows a total increased value of \$2,154,945 for 1924, an increase of 12.5 per cent over the 1923 figure, according to a report just issued by the Dominion Bureau of Statistics, Ottawa, in co-operation with the department of marine and fisheries.

The two chief fisheries are salmon and halibut. The value of the salmon and halibut fisheries together comprised 81 per cent of the total value of the fisheries of the province. The value of the salmon fishery in British Columbia for the year was \$1,100,000.

Capital represented in the vessel, nets, traps, etc., and other equipment, engaged during the past year in the primary operations of catching and landing fish was \$5,594,491, compared with \$5,780,772 in 1923.

New Press Is Speedy

A printing press with a capacity of 6,000 postal cards a minute has been purchased by Derby, Conn., to the government printing office at Washington. It is claimed that this press will supersede those that are now in use because of its mechanical perfection. The Japanese Government has ordered a similar one.

Wolf Habits and Importance

Interesting Booklet Which Can Be Had Free

Accounts of wild life and descriptive history of such animals are of value to the farmer. Of this nature is Mr. Norman Cridder's, "The Habits and Economic Importance of Wolves in Canada," published by the department of agriculture at Ottawa, and which can be had free on application to the publications branch there. Last winter it will be remembered that wolves were particularly prominent in the public mind, partly owing to their boldness and partly due to the formation of large hunting parties to pursue them. Mr. Cridder tells of the habits of the wolf, its habits, methods of feeding and economic status. He also tells what farmers are doing to protect their stock, and how the animals can be trapped, poisoned or otherwise destroyed and how the skin can be preserved.

World Forestry Congress

Important Event to be Held at Rome Next Year

Representatives of university forestry departments, schools of forestry and forestry associations from the four continents are to meet in Rome at an international forestry congress lasting from April 29 to May 6. "These responsible for the congress," say the advance notice, "trust that they will be able to bring together in Rome forestry experts representing all the continents, and that their collaboration a strong stimulus may be given to the advance of forestry throughout the world, and renewed confidence may be felt in the future of the forest, which is a factor of such importance to human activity and industry." The international forestry exhibition of wood working machinery and general forestry products is being included in the congress plan.

Winnipeg Pulp Mill

Mammoth Paper Mill May Be Erected

If Power Rights Are Secured

Assurances that they were prepared to go ahead immediately with the construction of a \$5,000,000 paper mill of 250 tons capacity in the Great Winnipeg district, provided the Dominion Government could secure a satisfactory power supply, were made by George M. Rea, president of the International Paper Company, and E. W. Backus, of the Chicago-Peoples interests in Canada and the United States.

The assurances were received with the utmost enthusiasm by the 300 representative men of Greater Winnipeg and other parts of the province present at a meeting called by Mayor Webb.

Suggests Colony Plan

Lord Mayor of Hull Makes Suggestion

Mr. Langford

Speaking at a gathering of Canadian and Newfoundland representatives in London, the Lord Mayor of Hull suggested that his city should adopt in each colony some place, village, centre toward which the colonial relationship should be concentrated and mainly directed.

The suggestion, however, in agricultural colonies, the Lord Mayor suggested that his city should adopt in each colony some place, village, centre toward which the colonial relationship should be concentrated and mainly directed. If their emigrants went to some definite district, and if some tangible and favorable scheme was devised, he thought they might attain a migration of very desirable colonists.

Interesting Documents Found

An ancient text file inscribed on tablet discovered by a French explorer in the ruins of Babylon. The text is in cuneiform and is believed to be a business document believed to have been written during the life of Abraham, and a document dated 230 B.C. during the reign of Nabonidus, the last king of Babylon.

New Insulin Discovery

A highly concentrated form of insulin, surpassing the potency of the standard product used in the treatment of diabetes, has been obtained by a group of scientists in research work carried out during the past year at Johns Hopkins University and the Chemical Laboratory, Pasadena, Calif.

Tourists For Canada

Nearly 29,000 people had booked for the "See for yourself" campaign to Canada, which began to run from Paris and French ports in July. Passengers included retired military men and civil servants, school teachers and hundreds of sons of farmers.

By reason of cheap labor, lands can produce hand-drawn lumber far cheaper than our modern sawmills. In the last 20 years the number of people enrolled in the public schools increased nearly one-third.

Geologists Say That Springs do

Not come from deep within the earth, but from the water which seeps through the rocks and is heated by steam from subterranean lava beds.

Party Of American Visitors Are Greatly Impressed With Trip Through Western Canada

Livestock Marketings in 1924

Fifth Annual Report is Issued At Ottawa

A vast deal of information is contained in the fifth annual report on the origin and quality of commercial livestock marketed in Canada, recently published by the livestock branch at Ottawa and which can be had of the publications branch there. This publication is the indication of many of such previous, by which the most profitable sections of production can be identified. It is interesting to note that the heaviest landweights, steers and steers of export weight and quality suitable for the British market were turned out in increasing numbers last year, and that all the five provinces had, namely: Quebec, Ontario, Prince Albert, Saskatchewan, and Manitoba, contributed to the livestock branch. This publication is the indication of many of such previous, by which the most profitable sections of production can be identified. It is interesting to note that the heaviest landweights, steers and steers of export weight and quality suitable for the British market were turned out in increasing numbers last year, and that all the five provinces had, namely: Quebec, Ontario, Prince Albert, Saskatchewan, and Manitoba, contributed to the livestock branch.

The fourth tour from Winnipeg through Dauphin, Melville, Watford, Prince Albert, Saskatoon, Estevan, Regina and through the Hudson Bay and Lake and Saltpetre Lakes, at Dauphin they enjoyed a full day's hunting and fishing. The party, numbering twenty-two from across the border, were most enthusiastic in their praise of the country they had visited, and were loud in their expressions of appreciation for the hospitality shown them by residents of the various districts visited.

Award Traveling Scholarships

Provide Tuition in Canadian Colleges For English Boys

A London cable states that of the scholarship tenable in agricultural colleges in Canada which the Fellowship of the Empire Exhibition is proceeding to allot, twenty-two have been awarded to English boys. The others will be distributed in Scotland and among English provincial districts.

Each scholar will be provided with a free passage to Canada, education and maintenance for a year, and afterwards he found suitable employment on the land in Canada.

Oil From Grickeles Valuable

Very valuable oil, suitable for aviation since it does not evaporate even at a very high altitude, can be made from crickets, according to scientists. The crickets were sent to Hull, and received at Washington by the department of commerce from Algeria. Recently about thirteen tons of crickets were sent to Hull from Algeria. Part of this quantity was sent to poultry and from the remainder oil was extracted.

A Better Neighborhood

A woman in the suburbs was chiding her husband for not moving to the next-door neighbor: "We've got to be living in a better neighborhood now," she said. "So are we," volunteered Mrs. Nextdoor confidently. "What? Are you moving too?" "No, we're staying here,"—Christian Brother.

Modernized

"Bill has a great fertility in putting the cart before the horse."

"That's a pretty stale figure!" he said. "Has a habit of trying to make the wheel run on motor."

"Oh, yes, Louise is studying French, Latin and algebra this year. Say how do you intend to algebra for the lady, Louis?"

The fortune that William H. Henshaw has stored away was doubtless saved for a rainy day.

When He Withed It

"The superintendent of the Sunday school said to a little boy who was absent at the regular attendance of his pupils, 'Dear children,' he announced, 'now today out of the whole school, only one is absent—this little fellow. Let us hope also to be ill.'"

Had His On Turtle

A swimmer off Lethbridge on Saturday recently was given a free ride by a big turtle. It suddenly showed the bather its head and water and carried him several feet.

The proximity of western Canada to the United States has made it a natural farming methods followed throughout Manitoba and Saskatchewan have been eye-witness to the party of United States farmers, recently taken on a tour of parts of Manitoba and Saskatchewan, by Dan M. Johnson, western manager, agricultural and horticultural, for the Canadian National Railway. On their return to Winnipeg, the party, numbering twenty-two from across the border, were most enthusiastic in their praise of the country they had visited, and were loud in their expressions of appreciation for the hospitality shown them by residents of the various districts visited.

THURSDAY, SEPT. 3, 1925.

PRINCIPLE IS WRONG

ACCORDING to information now leaking out it appears that at a meeting held in Regina recently, Hon. T. A. Cresser strongly advocated the formation of a western political party made up of Progressives and Liberals.

If the Liberals and Progressives wish to amalgamate for political expediency that is the business of the officers and rank and file of those two parties. But if they label the result of this amalgamation as a "western party" they will be making a grave mistake; a mistake which will be severely criticized and condemned by those in all parts of Canada who are in their country ahead of their politics.

There never was a time in the history of Canada when there was greater need for unity than right now. If this country is going to make the progress it should and be able to take advantage of the opportunities are even now knocking at her doors, there must be no dividing line or cleavage between east and west, and there must be a better understanding between producers and consumer and between labor and capital. Any movement, therefore, which would have a tendency to drive these elements further apart would be most disastrous to the welfare of the country as a whole and would surely act as a boomerang on those who started it.

While we are free to admit that in the west there are many reasons for complaint along several different lines, yet these grievances are not going to be remedied by actions, the primary object of which is to get votes and win elections. That sort of thing has a tendency, rather, to drive the several elements further apart and retard progress and development.

What this country needs more than anything else today is more statesmen and fewer politicians. Because of its geographical extent, climatic conditions and multiplicity of problems this country is one of the hardest to govern with entire satisfaction to all classes and sections. This is all the more reason why our leaders should be using their positions and influences in an effort to weld all sections and factions into one harmonious whole, instead of doing things to drive them further apart.

Although our problems are many they are not unmountable. With a little more of the spirit of give and take; a little more thoughtful and serious study of these problems with a view solving them in a way to do the greatest good to the greatest number, much can be accomplished.

The western political move is wrong in principle and if pursued is bound to end in disaster.

THE NEW LEADER

DAILY papers of all political leanings are loud in their praise of the ability of A. McGillivray, the newly selected leader of the Conservative party in this province. Mr. McGillivray is not only a man of undoubted ability. He is also a man well fitted in many re-

spects to lead any party or any government. Although yet a young man he may be considered an old timer in this province. Because of his long residence in Alberta and his many opportunities he has had of observing conditions in all lines of activities, he is well posted in the mistakes of the past and full of suggestions for the future.

All who have heard him or have read of his utterances since assuming the office of leadership, admire his fair criticism and his proposed suggestions for the improvement of every branch of the government work which he criticizes. Any one can criticize and find fault, but it takes one who is absolutely sincere and who has given some serious thought to the day, to suggest remedies and improvements. Mr. McGillivray appears to be this kind of man. For this reason he is bound to make an impression wherever he is heard.

The Toronto Globe thinks Premier King made a mistake in not accepting the arrogant challenge of the Senate in throwing out government measures. The Globe thinks the government should have dissolved parliament at that time and have gone to the country, when his chances for re-election were good. Evidently the Globe does not think the government's chances are very good now.

Daily party newspapers have been finding fault with Premier Greenfield's address to the members of the Alberta Press association at their convention in Edmonton last week. Members of the weekly press who heard the address were loud in their praise of views expressed by the premier. So there you are.

Here and There

The first batch of last winter's furs brought from the Far North by the steamer "Distributer" from Alaska, has arrived at Edmonton, Alta., and is valued at approximately \$1,000,000. Good catches of furs were reported throughout the north.

Beckers salmon fishing around Vancouver, B.C., for the first three weeks of the current season, while not as active as last year, has, so far, resulted in fairly good catches. The latest reports indicate a catch to date of 55,000 cases, which is 2,000 cases less than last year.

While the members of Dean Sisdale's party of school teachers from Ontario is returning East

from their tour of the country the party of British teachers, who landed in Canada recently, is now travelling through the West on a special Canadian Pacific train to gain knowledge of the country and information concerning its resources.

Construction of the half million dollar storage and power dam on the Muskoh River, authorized at its last session by the Ontario Legislature, has been commenced. The proposed work is designed to control the flow from the Muskoh Lakes basin and will enable the linking up of power development in that district with the Eugene-Sovern system.

Passenger traffic over Western Lines of the Canadian Pacific Railway to date this summer has been particularly heavy, and a large number of special trains and special cars have been opened for British, Canadian and American tourists. Late side and summer tourist travel to the annual exhibition at Saskatoon and other Western points required the operation of special trains.

Construction of one of the largest and most modern departmental stores at Winnipeg, Man., by the Hudson's Bay Company will be proceeded with immediately, according to an announcement by Mayor Webb of that city. A start upon the company's building programme here was secured, stated Mayor Webb, with the passing of a by-law by the City Council providing for a memorial boulevard flanking the Hudson's Bay property.

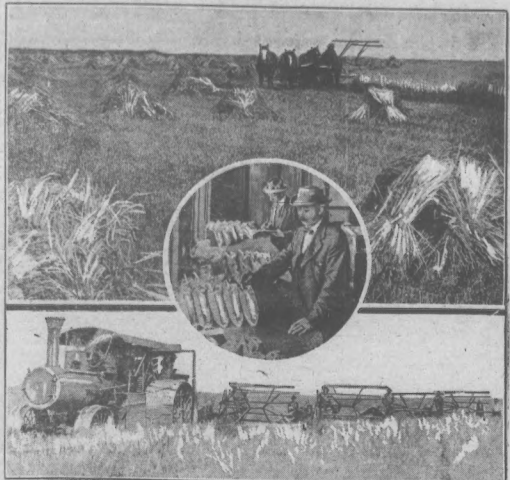

During the first half of August two important Ontario railway towns celebrated their Old Home Week and held pageants illustrative of their local history and industrial activities. These were North Bay and Smith Falls, both of which held C.P.R. Days and were the meeting points for thousands of railroad men, who assisted in the pioneering work of the districts. The Old Home Week at North Bay marked the graduation of that town to full-fledged cityhood.

The funeral in Montreal recently of the late G. M. Bosworth, chairman Canadian Pacific Steamships, was attended by E. W. Healy, chairman and president of the Canadian Pacific Railway, and nearly all the directors and executive officers of the company. An impressive and dignified procession followed the ceremony, a cortège being formed by the company's police and officers and men from the crews of Canadian Pacific steamships.

A party of thirty prominent American society people, scientists and artists, a week's tour in blizzing a new route along the Wolverine pass across the northern Canadian Pacific, together with the Trail Riders of the Canadian Rockies. The party this season have many favorable impressions of the country and its communities are represented. Twenty of the millionaires were gold and silver hunters, showing that they have ridden the mountains along the mountain.

The way Alberta's automobile population is growing there is need for discovering a big oil field.

"God Gives the Seed--the Bread We Need. Man's Labor Must Provide It."

Upper--The old method of reaping the crop. Lower--The modern method, fast--faster grain at elevators in Winnipeg.

It is estimated that sixty-nine thousand harvesters ships and discomfited endured on the journey to the wheat-fields. Now, however, all that is changed. Colonists can differ only in trifling details from the standard sleeping cars and they leave nothing to be desired in points of comfort, security and convenience.

There is every reason to suppose that the East will raise its quota of fifty thousand men. The inducements are unusually good. A bountiful crop is expected; wages are high and there are unlimited positions available. Many young men attending college country and join in the great adventure of bringing in the sheaves at the most profitable way of spending a holiday.

The dates for the excursions are, from Quebec, August 14th and 28th; and from Toronto and points in Eastern Ontario, August 18th and September 1st. From Western Ontario the dates are August 21st and September 1st. The rates are the same as last year.

So Winnipeg \$12.00 and from there to the final destination, half-a-cent a mile. These rates apply equally to women as to men and there are many tired Easterners who will take advantage of the excursions to make their first trip west, as much for the purpose of seeing the scenery "out west" and becoming personally acquainted with the geography and topography of the country as for taking part in the harvesting operations.

The Colonist car has kept pace with the remainder of railway equipment in the march of progress. In the olden days many prospective harvesters remained at home because of the stories they heard of hard

CAPT. C. S. PINGLE

Former member for Redcliff in Legislature, who was chosen Liberal Standard Bearer for Medicine Hat By-election on September 29th.

Exporting Raw Material

Exportations Appear to Constitute Mainly Of Agricultural Products

While talk about Canada exporting materials in a raw state and buying back the manufactured product is not supported by the figures, in the year 1924, 45.4 per cent of our exports were classified as raw material, while the percentage in the United States was 35.7, not a great difference when one considers the fact established by our neighbors and the home market created by a population of about 11,000,000.

Furthermore, it is to be borne in mind that the so-called raw materials exported consist mainly of agricultural products. In 1924, for instance, the total exports of Canada were valued at \$1,945,000,000. More than half the exports originated on Canadian farms. These were as much the products of skilled labor as the output of factories. This gave employment more than half the workers of Canada, and maintained a population of 4,484,011 men, women and children. It is absurd to speak of this gigantic industry as inferior to those of the cities and towns. Anybody who thinks that the raw materials can be raised by unskilled labor would speedily change his opinion after a few months' practical experience. —The Toronto Globe.

Feeding Visitors to Wembley

Bakery Works Day and Night to Supply Demand

One of the interesting sights at Wembley exhibition is the bakery that works unceasingly day and night to supply the needs of visitors to the fair. The bakery has been equipped with a large number of machines, all kinds to the cakes and pastries, thus obviating the troubles and worries of transport of such supplies to the exhibition. Sixteen steam-pipe ovens have been installed in the bakery. In a fire-brick building, the ovens are in a small fire of smokeside ovens. Along the roofs of the ovens is a series of tubes, each hermatically sealed, and in these tubes is water which, heated by the coils fire, circulates and provides the necessary cooking heat. Rolls, kneaded by machines, are put into the ovens on great trays of sheet iron. The baker can watch the actual baking process by means of an electric light which lights up the inside of the oven. One hundred thousand rolls can be turned out every day. In the kitchen, 500 loaves of bread a day; and electric potato peeling and cleaning machines, each dealing with a ton of potatoes in an hour.

United States Annexes Island

Bit of Land Off North Coast of Africa Of No Value

Swain's Island, about 200 miles north of Africa, the chief island of the Hawaiian group, in the latest acquisition of the United States, provision for its annexation having been made in the last session of the Congress. English map include Swain's, under one or another of its several various names, in the Tolidian group, and put a ring around the whole aggregation, which runs the label "British Isles." It does not appear, however, that British have ever made any official assertion of sovereignty over Swain's Island in particular. The better known islands of the Tolidian group are little larger than Swain's and they lie far to the north of it. About 130 miles of open ocean separate it from Pelelue, the nearest land under distinctly British rule.

The United States will gain nothing by its new acquisition, but it will assert law and order to a handful of people too few to support a government of their own and too few to support a permanent regular authority in perpetuity to keep their relations in order.

Why the Change?

Can anyone explain how it is that the average man, when on foot, meeting a lady approaching a street intersection, will invariably step aside and allow her to cross first, and when, in the same man, in an auto, sees a lady approaching an intersection, will invariably tout his horn and pass without ever acknowledging her and stopping to allow the lady to cross first—Kingston Standard.

New Profession For Women

Growing professions in the West include not a confederate of the many women. Miss Nellie Hamel-Smith, a young English woman, says in "The Ideal Life" the employer stay with the client and operate over a hundred acres devoted to connoisseurs.

More Hens But Fewer Eggs

Requirements of World Have Decreased in Last Two Years

The poultry production map of the world has undergone remarkable changes in the past 15 years. Everywhere, possibly except Russia, chickens seem to have increased, but the number of eggs in world commerce has diminished.

Commerce figures of the various countries show that fifteen years ago about 70,000,000 dozen of eggs in the world were required, while in 1923 only 40,000,000 dozen were needed.

In 1919 Russia exported 264,000,000 dozen of eggs; England imported 215,000,000 dozen, and Germany 278,000,000. England still takes about the same number, but Germany has practically faded out of the picture. China now holds first rank as an exporting nation with about 90,000,000 dozen.

Each country is now more nearly producing its own requirements. The eggs that do get into commerce are mainly to take care of the seasonal declines in production in the various countries.

In the United States the perfection of cold storage methods makes the exportation unnecessary, while the growing season of production at home keeps leaves us each year without a surplus.

As to the production of eggs in the U. S., it was 1,293,000,000 dozen in 1924 production had jumped to more than 2,200,000,000 dozen.

This figures out to about 20 dozen eggs a year for every person, a tremendously high average and one that is being increased every year.

It does not seem likely that home consumption can be very much increased, and that the surplus is in a position to absorb large quantities of eggs at present prices. The world's poultry map does not encourage exportation of surplus at the present time.—Country Gentleman.

Cracks in Concrete

Knit Automatically

Joists Formed Are Even Stronger Than Unbroken Part

Concrete that is cracked and broken can be knit together again, according to tests just completed by Prof. Duff A. Abrams at Lewis Institute. These tests were made by the first of this type.

Concrete cylinders, once cracked, and restored after eight years' exposure to the weather were found to be more than two and one-quarter times as strong as the original test was made. When they were examined before retreating, practically all of the cracks had disappeared. It was known that concrete gained in strength with age, but Prof. Abrams' test gave definite figures concerning the healing properties of concrete which was kept moist.

The cracks which appeared in a test concrete highway bridge, when it was subjected to a tremendous load, closed up. The cracks were carefully mapped and photographed after two preliminary tests had been made. A year later when the bridge was again overloaded, again, comparison revealed that many of the old cracks did not reappear, but new cracks were found in the same places. Prof. Abrams stated that this condition was due to the healing of the cracks and the formation of a joint even stronger than the unbroken concrete.

Problem Of Earth's Age

Scientists Hope to Be Able to Arrive At Solution

How old is the earth? This is one of the problems about the frontier of science.

The national research council has appointed a committee called the Committee on the determination of geologic age through atomic disintegration to study the problem.

We know that radio-active elements are disintegrating or going to pieces. Thus uranium in time becomes radium and radium in time becomes lead.

The rate at which this disintegration goes on is always constant. Thus, if a rock is found which contains both uranium and lead, the lead must have originally been uranium, and we can calculate how long it would take the change to occur.

The age of a uranium deposit in Canada is calculated to be 22,000,000 years old on this basis. One in Ontario, Canada, is at least 1,200,000,000 years.

More study of this sort, it is thought, may enable scientists to estimate the age of the world.

Cattle Shipments To Britain

Since the British cattle embargo was lifted, on Aug. 1, 1923, 15,676 head of cattle had been shipped to Great Britain up to May 31 last, and the estimated value to Canada, of the shipments, was \$1,135,176, according to a statement made by the federal department of agriculture.

Profers South Sea Islands

Manitoba, Premier Has Explored Tropical Lands In His Own Boat

"Cathartes in the South Sea Islands, or outwards in western Canada." Well, give me the chance every time! I never was much at sailing."

That was the assertion of Frank Burton, who came to Winnipeg first in 1880 and knows all about the coast and Red River coast means of transportation. Recently he appeared again in the Manitoba capital, this time travelling by railway.

"I am a savage at heart," Mr. Burton proclaimed, adding that after a period of unsuccessful farming, he had obeyed the appeal of "his savage instinct." "I realized that the only way to explore the South Sea Islands properly was by having my own boat. I acquired an 8-ton schooner, had it fitted as a yacht and, accompanied by my family, set sail. When we reached Honolulu after 43 days of the worst weather that could be imagined, I took on a crew of six Polynesians and then for two months we disappeared, as far as civilization was concerned."

The idea that cannibalism is extant is quite wrong," Mr. Burton stated. "The Papuans practice it just as much as they did in the fifteenth century."

Mr. Burton said that when Mr. Hurst left last week the Solomon Islands, he was in company with a trading party of 40 men. While he was there, seven of the party were killed and six by the natives. There were also the head-hunting Dyaks and the Polynesians who are cannibals. Neither, however, were cannibals.

During these South Sea tours, Mr. Burton collected a variety of specimens, including several birds, well preserved. This collection has been presented to the University of Manitoba.

Despite his 73 years, Mr. Burton will launch upon another trip to tropical lands. He proposed to start on the trip this fall.

Zoo's Greatest Attraction

People Are Always Fascinated By Antics of Monkeys

As in every great zoo, those of London, London, Amsterdam and Paris, the monkey house is also the greatest attraction at the Bronx (Garden, New York). This is a magnetic attraction for the human species in the antics of the simian individual. The monkey was there when the first man was on earth, and he is a Javanese monkey family was shown on a recent Sunday that the police had to be called in. The object of interest was a gray-colored, fat with face of a great-grandfather who had got hold of a paper's roll and was trying to eat it before he got it to pieces and sharing it with the members of his long-tailed household.

New League Secretary

Mr. George Foster, president of the League of Nations Society of Canada, announced that Lord-Cliff, C. T. Meredith, formerly of the Canadian Engineers, will take over the duties of secretary of the League of Nations Society of Canada on the retirement of Mr. Foster.

Woman Explored French Congo

Mme. Gabriella D'Amico has just returned from an expedition trip to the French Congo, in which she visited sections never before invaded by white people.

To Control Weeds

Weed Suppression and Control by Ploughing and Cultivation Methods

Relative to control and suppression of weeds the Dominion field husbandman C. B. Douglas advises that in the case of three or four years' rotation, consisting of one year in corn or other tiller-tillied crop, one year in grain, and one or two years in hay, that for the inter-tillied crop the land should be thoroughly prepared and the crop similarly cultivated. In the four-year rotation the timothy and clover can be ploughed by August 1, but in the case of the three-year rotation, where two cuttings of clover are harvested, the ploughing will not be possible until about September 1. Where couch grass is present, or any other weeds having underground root-stalk, it is important to get the land ploughed early and to cultivate it throughout the remainder of the fall. After ploughing it should be harrowed and then rolled, and the weeds should be killed at about a week's interval until the soil has rotted sufficiently to allow the use of the cultivator.

Beefsteak Was Expensive

Sold For \$48 a Pound During Klondike

In a town of Alaska, where, during the Klondike gold rush, sprang up almost overnight, the first beefsteak to be reached it cost for \$48 a pound. It was a 10-lb. steak which had been shipped from 200 miles away.

When the precious bit of meat reached the camp the miners turned out in a body to see it. It was placed on an exhibit and attracted so much attention as to be kept there, everybody wanted a piece of the steak, and the result of the rivalry for its possession might have been a riot if it had not been decided to raffo it for the benefit of the miners' hospital. Tickets carrying the privilege of drawing for a slice were sold at prices from fifty cents to two dollars fifty cents. After the drawing had been made the drawing began, and, to the relief of those in charge of the sale, no trouble resulted.

Ancient Door Kept Presented To Prince

Heirloom Was In Possession of South African Lady

More than a year ago, a gruffing surprise was in store for the wife of the Duke of Devonshire when she was asked to accept the key to the door of the Duke of Devonshire's house. The key was a relic of the Duke's father, who had been a great-grandfather of the Duke of Devonshire. The key was a relic of the Duke's father, who had been a great-grandfather of the Duke of Devonshire. The key was a relic of the Duke's father, who had been a great-grandfather of the Duke of Devonshire.

B.C. Honey Crop

An official report just completed shows that the honey crop of British Columbia, for the 1924 season and the other information as at the end of 1924.

The total honey crop was 18,915 tons, against 15,164 tons for the preceding year. In 1924 the crop was not quite 178 tons. In 1925 it was 1774 tons. In 1925 the bumper crop year, 36,615 tons.

French-Canadian Teachers Start Tour Across Canada

The trip, which covered the run across Canada to Victoria and Vancouver and return, was the first of kind ever undertaken by an all-French-Canadian institution. A similar expedition, under the auspices of the Teachers' Federation of Canada, left Toronto on July 25th to visit all the important scenic and business centres between Ontario and the Pacific coast.

Why the Change?

Letter Delayed Thirty Years

Written in January, 1896, Has Just Reached Edmonton

Intimates that he had been granted a substantial advance in salary, failed to arouse Short Peter Gunn, of Edmonton, to any unusual pitch of enthusiasm. Not that he did not appreciate the liberality of his employer, but rather to the fact that he will never reap the fruit of the "increase."

He was notified of his salary rise in a communication from the north country, but—here's the catch—it was written 30 years ago. By some trick or fate the letter had gone astray, but reached Mr. Gunn after such a long lapse of time in an excellent state of preservation.

The letter is dated January 6, 1896, and was written by Eben Macdonald, at that time manager of the Peace River district for the Hudson's Bay Company. Peter Gunn, then comparatively young, was employed at the company's post at Lesser Slave Lake.

The lady Macdonald, Macdonald, long since dead, informs Mr. Gunn, in letter that his "services have been highly satisfactory" and that as a result, he has been awarded a "magnificent" increase in English pound sterling.

Just how much the "magnificent" increase amounted to, Mr. Gunn declined to divulge, but it was so small or so large that it caused the sheriff to chuckle.

The letter reached Edmonton in a strange manner. An accompanying card estimated that the communication had been found by a forest ranger, close to the Hudson's Bay post at Inuvik, among a pile of old documents, diaries and books. The documents had been thrown out by some of the employees of the post at a time unknown. Just how many years it had remained hidden under the dust is not known, but it did not reach Edmonton too late to annoy him that his services while in the far north had been fully appreciated by his employer.

Sleep Can Be Measured

Scientists Have Different Means For Testing Depth of Sleep

Persons differ very greatly in their mode of slumber. Some awaken at the slightest noise, while others are only aroused with difficulty. These differences have been carefully classified by a scientist. When scientists speak of "fast" a person sleeps they mean how deep is his sleep. Not only is it possible to measure sleep, but there are different means of doing so. One method is by dropping a steel ball. The ball is dropped at the slightest noise, and, if the person sleeps, the ball will drop to the floor. If the person awakes, the ball will be caught by the person's hand.

Why Queen Victoria

Disliked Weymouth

Local Creditors Held Her Falsely Body Until Debt Was Paid It may seem strange to speak of a queen who was so loved and so respected as Queen Victoria, as being disliked by Weymouth. But it is true. Queen Victoria's father, the Duke of Kent, had rather suddenly at Weymouth, his local creditors would not permit the removal of the remains to London for the final obsequies, or the departure of his widow and only daughter, Princess Victoria, until his liabilities there had been discharged after some delay by his brother, the late Prince Regent. His daughter, Queen Victoria, never forgot or forgave this indignity. And tragically, and in the end of her life, Weymouth was formerly the favorite seaside resort of the members of the reigning house. Queen Victoria, however, was absolutely decided to visit only the town and discouraged her relatives and all the members of her court from doing so.
